

ANGELO PROBST

Problem solver, idea sharer, coffee drinker.

I work solo or with teams to get things done and make the process as enjoyable as the result.

✉ angelo.probst@gmail.com 📍 Santa Catarina, Brazil 🕒 UTC-3 (flexible shifts) 🔗 [linkedin.com/in/angelo-probst](https://www.linkedin.com/in/angelo-probst)

SKILLS

BACKEND: Python [Flask, SQLAlchemy, Django, FastAPI, pydantic, asyncio], C++ [stds=98,11,14,17,20, Boost, CMake/toolchains, cross-compiling].
AI: Chatbots and Agents with OpenAI and Gemini, prompt engineering, Pydantic AI, Instructor, LangChain, LangFuse, Google TTS, Deepgram STT.
DATABASE: PostgreSQL, PostGIS (Geo processing), MySQL, MongoDB, Oracle, AWS RedShift, Hive with Trino/Presto+[Iceberg,Hudi,Parquet].
DATA PIPELINE: AWS [EMR, Glue], [Py]Spark, Hadoop, Trino/Presto, Apache [Iceberg, Hudi, Parquet, Kafka], Argo [Jobs, Workflows, Sensors, Events].
CLOUD: AWS [IAM, S3, EKS, EC2, EMR, RDS, RedShift, Kinesis, Glue, SQS/SNS, Lambda], Terraform, Boto3.
INFRASTRUCTURE: Linux [multiple distros, including embedded], Docker, Kubernetes, networks, users management, processes management, filesystems, Telemetry [Distributed Tracing, OpenTelemetry, Prometheus, New Relic, Datadog].
MISC: ELK stack [ElasticSearch, Logstash, Kibana], Redis, Async messages/PubSub [MQTT, ActiveMQ, Kafka], Google Protobuf, Avro, GIT, GIT flow, CI/CD, Jenkins, Scrum, Jira, Shell Script, Jupyter, DevOps, diagramming and documentation.

EXPERIENCES

Yutori | <https://yutori.com/>
Senior Software and Data Engineer | May 2026 - Present
United States | Full-time | Full-remote | Working through a [Midwestern](#) contract.
• Next generation of web agents.

Checkmate | <https://www.itsacheckmate.com/>
Senior Software Engineer | Feb 2025 - Jun 2026
New York | Full-time | Full-remote
• Chat bots for Drive-Thru and Phone-Delivery restaurants.
• Python, FastAPI, asyncio, pydantic, prompt engineering with OpenAI and Gemini, LangFuse, speech-to-text with Deepgram, text-to-speech with Google, sqlalchemy + alembic with PostgreSQL, Redis, Docker, websockets, observability with OpenTelemetry and Datadog, static analysis with ruff and pyright.

SingularityNET | <https://singularitynet.io/>
Software Architect | Jun 2024 - Jun 2025
World | Full-remote
• Fundamental pillars for AGI.
• Python, C++ (std >= 11, cmake, conan), Bazel, poetry, nanobind/pybind11, distributed databases with MongoDB + Redis + OpenFaas, MeTTa Programming Language (<https://metta-stdlib.readthedocs.io/>, <https://metta-lang.dev/>).

IBM | watsonx Orders | formerly known as McD Tech Labs
Senior Software and Data Engineer | Jun 2022 - May 2024
San Jose, California | Full-time | Full-remote
• Helped the Core Components team to stabilize and improve the robustness of the microservices.
• Implemented the Distributed Tracing framework used by the microservices, and helped the different teams to apply the tracing instrumentation on their code base.
• Worked together with the SRE team to organize the monitoring tools, create dashboards and alerts based on logs and telemetry data, and standardize the RCA processes.
• Collaborated with the Data Infrastructure Team to reduce AWS costs by replacing RedShift with a hybrid solution based on Spark+Hive+Trino+[Iceberg,Hudi,Parquet].

McD Tech Labs | a McDonald’s startup | acquired by IBM
Senior Software and Data Engineer | Aug 2020 - Jun 2022
Mountain View, California | Full-time | Full-remote
• Worked focusing on core logic of the AI product: microservices, distributed processing, telemetry, and scalability of a platform that reaches tens of millions of customers per day.
• Helped to design and implement solutions using Python, Flask, SQLAlchemy/Alembic, AWS (multiple resources/services), Docker, Kubernetes, Linux, OpenTelemetry, MQTT Pub/Sub (Eclipse Mosquitto), Audio Processing, and several others.

Verint | an American-Israeli company
Senior Software and Data Engineer | Jan 2011 - Aug 2020
Santa Catarina, Brazil | Full-time | On-site
• Worked on legacy projects using C++ (Boost, Cmake/toolchains, cross-compiling), Python, Shell script, PostgreSQL and Oracle Databases.
• As part of the R&D team, designed and implemented multiple solutions using Python (Flask and Django), C++, Docker, Kubernetes, ELK stack, AWS, Kafka, Apache Avro, Google Protobuf, PostgreSQL/PostGIS, Vue.js, among others, dealing with huge amounts of data (more than 2 billion events/documents per day).

Cognyte | formerly known as Suntech
Software and Infrastructure Engineer | Nov 2004 - Jan 2011
Santa Catarina, Brazil | Full-time | On-site
• Worked on large projects using C++, Python, Shell script and Oracle Database, focusing on Telecom Engineering solutions.
• Led a multi-skilled team to design and develop an ElasticSearch-like solution with Ruby (using Ferret), Python, C++ and Java.
• Organized the DevOps procedures and standards to be applied to the production environments (hardware, operating systems and networking).

Specto Tecnologia
Software Developer | Apr 2003 - Nov 2004
Santa Catarina, Brazil | Full-time | On-site
• Implemented services in C++ (STL, GDB for remote debugging, cross-compiling, Emacs) to run on Embedded Linux boxes (platforms: Motorola 68K and Motorola PowerPC MCUs).

EDUCATION

Universidade do Vale do Itajaí
Bachelor’s degree | 1999-2004
Computer Engineering
GPA: 8.06/10

HONORS AND AWARDS

Universidade do Vale do Itajaí
Graduated with honors
(*Summa Cum Laude* equivalent)
For the best student in the class among the graduates of 2004.

EXPLORING / INTERESTED IN

- Rust
- Go
- WEB3/Blockchain

PERSONAL INTERESTS

- Coffee
- Traveling
- Fitness
- Bicycles
- Nutrition
- Music (as a musician)
- Cocktails
